Your Vision, Our Future

Do not fear to be eccentric in opinion, for every opinion now accepted was once eccentric. Bertrand Russell.

It may seem that single site laparo-endoscopic surgery makes more difficult, even unsafe, the accomplishment of surgery. But this was the common thinking about laparoscopy when the minimal invasive surgery revolution started: minimal invasiveness is not just an "eccentric" option when reproduces the same good results of standard surgery. This conference will be the forum for discussing costs and benefits of single site laparo-endoscopic surgery, showing state of the art technologies and techniques, reporting experiences and results after 3 years that such a new approach was introduced into the clinical practice in many field of surgery. A forum where sharing opinions with some of the pioneers and world recognized experts with a glance on possible future scenarios of surgery. Welcome to Rome, welcome to the Triple S Symposium.

Marco Maria Lirici, MD, FACS
